

# Radiation: 90% of mobile phones and electronic devices harmful to human health

**December 14, 2021** – The Mount Vema Health Authority announced today that it will propose laws to heavily regulate the distribution and use of certain mobile and electronic devices in Mount Vema to protect the population from exposure to radiation.

The Health Authority said that all electronic devices using electromagnetic radiation in the microwave range will be subject to tests and review before license is issued, as some are harmful to human health.

At some point in the near future there will be just over one million people living in Mount Vema based on employment availability and projected accommodation capacity, so the use of mobile devices such as mobile phones in some public places including public transports will be restricted according to sources working on legislation. People will have to switch off when in public transport or crowded places except in case of emergency.

The Health Authority which has been working with FMA, its division also known as The Food and Medicines Agency of Mount Vema, which is responsible for protecting and promoting public health through the control and supervision of food safety, dietary supplements, prescription and over-the-counter pharmaceutical products including medications, vaccines, biopharmaceuticals, blood transfusions, medical devices, electromagnetic radiation emitting devices (ERED), as well as cosmetics, animal foods & feed and veterinary products, said today that it embraces technology in all form but not at any cost.

Regulation will also be extended to digital wireless systems, such as data communication networks, which are also believed to produce similar radiation, that causes certain types of tumors, cancers according to health officials working on plans to prevent or minimise the impact of any long-term health risks related to excess radiation in the Kingdom of Mount Vema.
