

More trade facilitation deals on the agenda as Mount Vema set eyes on the European Union

June 10, 2021 – The establishment of infrastructure that can facilitate the safe journey of people travelling between the Kingdom of Mount Vema – The Vema Seamount Territory and the European Union seeking employment or investment opportunities has become part of the agenda of His Mount Vema Majesty’s Government.

The City of Mount Vema project is extremely popular among businesses seeking investment opportunities in North America, but in Europe especially within the European Union the project is popular among people seeking employment opportunities not just in Mount Vema but also on its related projects globally.

Mount Vema is open to the possibilities of serving all interests however, security is always the main concern. According to VSBCnews sources, the current number of people holding Mount Vema passports who would be willing to travel to the European Union, or the United States is small, and they are highly vetted by His Mount Vema Majesty’s Security services.

However, the projected number of Mount Vema Citizens within the next 50 years which is very unlikely to reach 100,000, or the future residents of the City of Mount Vema within the next 50 years which could be just about 1 million people, in comparison with for example the citizens or residents within the European Union one could understand Mount Vema’s concern in terms of identification risk.

So, Mount Vema is looking for a customs deal with the European Union that can include the mechanism of sharing intelligence on high-risk individuals travelling or planning to travel from Mount Vema to Europe or from Europe to Mount Vema, so this way it can become easier to promote and facilitate the safe journey of people and goods.
