

ARCKrove to open more than 10 factories worldwide as the search for sites begun

August 19, 2021 – Apart from Vander Legal, the leading law firm of Mount Vema, there is no other entity of Mount Vema that holds the key to the success of the City of Mount Vema project than ARCKrove.

When a city of Mount Vema project participant needs anything, this is the company they call first. ARCKrove, the leading manufacturing company of Mount Vema that specialises in research, design, manufacturing and assembling products to specification.

It is ARCKrove that ensures that materials are modified through manufacturing processes to become the required part for production of more complex products, such as ships, household appliances, furniture, construction equipment or automobiles and more.

ARCKrove doesn't make everything. It outsources some of the work, but it is the company with more contracts than any other legal entity of Mount Vema. The company has confirmed today that it is ready to work with the Government to advise on which countries it should consider opening its factories, outsource or order parts and components, to facilitate the easy flow of goods and services to Mount Vema.

Some of the key projects that ARCKrove needs to get started on are the City of Mount Vema desalination plant, the wind power generators, the sections of the shipbuilding factories for Handy Deed's floating dry dock projects and other mould to be used on the construction of the breakwaters and the Port of Mount Vema.
